Tender Pack - Addendum no.2 – 18/11/2026

Supply, Installation, Commissioning and Maintenance of CCTV Systems Across 7 Conwy Leisure Facilities

Project Reference: CCTV-LS-2026-01

Specification document

The Authority wishes to clarify that integration with the Meyertech Fusion platform is not a requirement of this procurement.

Following further review of the operational requirements for the Conwy Alarm Receiving Centre (ARC), tenderers should assume that CCTV systems will provide local recording and storage at each leisure facility, with the required minimum 31-day retention period maintained locally. Tenderers should therefore not include costs associated with Meyertech Fusion integration unless proposed as an optional enhancement.

The Authority's requirement is for remote monitoring and viewing capability from the ARC via the Council's existing Dahua management environment, currently comprising SmartPSS Lite and/or DSS Pro. The Authority will provide WAN connectivity between the leisure facilities and the ARC. Tenderers shall provide all CCTV equipment, local infrastructure, software licences, configuration and commissioning necessary to deliver the proposed solution, including successful remote viewing functionality from the ARC via the Authority's agreed network handover point.

For the avoidance of doubt, this clarification supersedes any wording within the Specification that may imply a requirement for direct Meyertech Fusion integration. In the event of any inconsistency between the Specification and this clarification, this clarification shall take precedence.

Invitation to Tender document

To reflect the Specification amendment Question 7.1 is now amended from:

7.1 Integration with Existing Systems

Describe how your proposed CCTV solution will integrate with Conwy County Borough Council's existing Alarm Receiving Centre (ARC) environment, including Meyertech systems and Dahua remote-site viewing software. Please provide manufacturer information sheets where appropriate and detail any software, licensing or infrastructure requirements.
